PROFESSIONAL SUMMARY

Software Engineer with 5 years of experience building full stack production systems across financial services, healthcare, and marketing. Delivered end-to-end features from design through production using Python, Django, FastAPI, React, and RESTful APIs. Built reliable platforms with PostgreSQL, MongoDB, Docker, Jenkins, AWS, and AWS RDS while improving speed, quality, and release consistency. Drove innovation with OpenAI API, LangChain, Claude Code, and Cursor to accelerate delivery and automate repetitive work. Known for cross-functional collaboration, clear communication, strong problem solving, and adapting quickly in fast-moving environments.

SKILLS

- **Programming Language:** Python, Elixir
- **Frontend Technologies:** React
- **Backend Technologies:** Django, Django REST Framework, Flask, FastAPI, Phoenix
- **Databases:** PostgreSQL, MongoDB
- **Cloud Platforms:** Amazon Web Services, EC2, AWS RDS
- **DevOps & Infrastructure:** Docker, Jenkins, CI/CD
- **API & Integrations:** RESTful APIs
- **Generative AI & LLMs:** OpenAI API, LangChain, Claude Code, Cursor

EXPERIENCE

Voya Financial

Software Engineer

Aug 2024 - Present

Financial services organization focused on retirement and investment solutions, delivering full stack production systems, cloud delivery, and AI-enabled workflow improvements.

Tech Stack: Python, Django, FastAPI, RESTful APIs, PostgreSQL, Docker, Jenkins, Amazon EC2, Amazon RDS, OpenAI API, LangChain, Claude Code

- Owned end-to-end feature delivery from design review through production release in a fast-moving SaaS environment, increasing transaction processing speed by 35% and tightening handoff quality across the delivery lifecycle.
- Drove a more adaptable architecture with FastAPI while partnering across product and engineering to keep financial workflows stable as requirements shifted.
- Introduced Claude Code into daily development as one of the AI Coding Tools, accelerating implementation on ambiguous work and shortening delivery cycles by 2 weeks.
- Automated deployment and environment provisioning with Jenkins and Docker, cutting release time substantially and improving consistency across builds.
- Scaled backend reliability on Amazon EC2 by resolving latency hotspots and maintaining production readiness for high-change release trains.
- Applied OpenAI API and LangChain to streamline repetitive operational tasks, improving team throughput and reinforcing a culture of continuous learning and AI-driven improvement.

PharmEasy

Python Full Stack Developer

Nov 2021 - Jan 2023

Online pharmacy and healthcare platform where full stack delivery, product partnership, and reliable application behavior supported rapidly scaling operations.

Tech Stack: Django REST Framework, React, MongoDB, Cursor, Python, Django, FastAPI, PostgreSQL, RESTful APIs, Amazon Web Services, AWS RDS

- Coordinated architecture decisions with product, design, and business partners, then delivered reliable services that kept healthcare operations stable as usage scaled.
- Shipped full stack production systems with Django and React, improving order-processing efficiency by 35% across prescription and pharmacy workflows.
- Refined RESTful APIs and service boundaries to align inventory, delivery, and prescription flows within cross-functional delivery teams.

- Explored Cursor during development as part of AI Coding Tools to move faster on unfamiliar modules, strengthening a bias for action and reducing implementation effort by 40%.
- Modeled operational data in MongoDB to support flexible healthcare records and improve retrieval patterns for pharmacy operations.
- Translated user and business feedback into production-ready features, combining deep problem solving with clear communication across stakeholders.

WPP

Python Developer

Mar 2020 - Aug 2021

Global advertising and marketing services organization supporting campaign platforms, analytics, reporting, and fast-paced client delivery.

Tech Stack: Flask, CI/CD, Agile, Elixir, Phoenix, Python, Django, Django REST Framework, PostgreSQL, RESTful APIs, Docker

- Mentored teammates through code reviews and knowledge sharing, raising the team's collective ceiling and improving delivery quality across releases.
- Built production systems with Python and Django that improved campaign operations efficiency by 30% and supported real client-facing impact.
- Delivered innovative solutions in a fast-paced environment by pairing Flask services with Elixir-based workflows for specialized reporting needs.
- Strengthened API integrations and PostgreSQL-backed reporting pipelines to keep campaign data reliable for stakeholders across multiple teams.
- Promoted cross-functional collaboration by clarifying requirements with project stakeholders and turning ambiguity into shippable functionality.
- Standardized release practices with Docker and CI/CD, improving consistency, accelerating handoffs, and supporting agile delivery across the stack.

EDUCATION

Texas A&M University Kingsville

Master of Science in Computer Science - Texas, USA - Aug 2023 - May 2024
