Company: GEICO

Target Role: Data Analytics Engineer

Location: San Diego, CA

Subject: Application for Data Analytics Engineer - GEICO

Dear Hiring Manager,

I am excited to apply for the Data Analytics Engineer position at GEICO. With over 2 years of experience as a Data Analytics Engineer, I have developed a strong skill set in Python, SQL, Snowflake, and data visualization tools like Tableau and Power BI. The opportunity to contribute to GEICO's contact center operations and enhance data practices aligns perfectly with my passion for leveraging data to drive actionable insights.

In my current role as an AI Data Specialist at Handshake, I have successfully validated and audited over 30K candidate and job records, enhancing dataset accuracy for AI-driven recruitment. I automated quality checks and anomaly detection workflows, reducing manual review efforts by 35% while improving data integrity. My experience in building Snowflake-based data models has provided product and data teams with clearer visibility into dataset health, which I believe is crucial for the analytics work at GEICO.

Additionally, during my time at California State University as a Graduate Student Assistant, I developed Tableau dashboards that tracked placement rates and employer engagement, enabling leadership to make informed decisions based on workforce insights. I also automated KPI reporting processes, saving significant time for the team and enhancing operational efficiency. My hands-on experience with A/B testing and statistical analysis using Pandas has equipped me with the skills to evaluate and improve data practices effectively.

I am eager to bring my analytical skills and experience to GEICO, contributing to the development of reliable data solutions and actionable insights. I look forward to the possibility of discussing how I can support your team in achieving its goals. Thank you for considering my application.

Sincerely,

Guna Yaswanth Gadde
