

Sudheeksha Vuppu

Software Engineer

Atlanta, GA - vuppusudheeksha96@gmail.com - +1 (913) 777 1253 - [LinkedIn](#) - [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 5 years of experience building and shipping production software across financial services, healthcare, and digital marketing. Strong hands-on background in Python, Django, FastAPI, RESTful APIs, PostgreSQL, Docker, Jenkins, and cloud delivery across AWS services. Delivered AI-enabled features with OpenAI API, LangChain, Semantic Kernel, and LangGraph, including workflow automation and model-integrated application logic. Contributed to backend services, data access layers, evaluations, and operational fixes that improved performance, reliability, and release consistency. Collaborative engineer known for partnering across product and design needs, writing clear documentation, and using measured results to guide improvements. Broad exposure to React, MongoDB, Flask, CI/CD, and Kubernetes supports end-to-end delivery and practical debugging in production environments.

SKILLS

- **Programming Language:** Python, Java, Go, C#, TypeScript
- **Frontend Technologies:** React
- **Backend Technologies:** Django, Django REST Framework, Flask, FastAPI
- **Databases:** PostgreSQL, MongoDB
- **Cloud Platforms:** Amazon Web Services, EC2, AWS RDS, Google Cloud Platform, Microsoft Azure
- **DevOps & Infrastructure:** Docker, Jenkins, CI/CD, Kubernetes
- **API & Integrations:** RESTful APIs
- **Generative AI & LLMs:** OpenAI API, LangChain, Semantic Kernel, LangGraph

EXPERIENCE

Voya Financial

Software Engineer

Windsor, Connecticut, USA

Aug 2024 - Present

Financial services engineering focused on production AI features, backend services, and cloud-delivered application workflows.

Tech Stack: Python, Django, FastAPI, RESTful APIs, PostgreSQL, Docker, Jenkins, Amazon EC2, Amazon RDS, OpenAI API, LangChain, LangGraph, Microsoft Azure

- Built AI-enabled backend features with Python for production workflows, improving customer transaction processing speed by 35% while supporting AI-powered products delivery.
- Developed retrieval-augmented generation (RAG) service flows and RESTful APIs that connected internal workflows to customer-facing applications, with instrumentation and logging for release visibility.
- Shipped orchestration logic with LangGraph to coordinate multi-step AI tasks, cutting manual handoffs by 28% across a pilot workflow.
- Partnered with Product, Design, and Data Science teammates to translate requirements into software decisions, surface tradeoffs early, and keep execution aligned.
- Automated containerized releases on AWS EC2, reducing deployment time by 50% and improving consistency across production rollouts.
- Documented operational behaviors and runbook updates for AI services, helping the team investigate incidents and resolve issues faster.

PharmEasy

Python Full Stack Developer

Mumbai, India

Nov 2021 - Jun 2023

Healthcare platform engineering across prescription, pharmacy, and fulfillment workflows with application support for quality, reliability, and issue resolution.

Tech Stack: Django REST Framework, React, MongoDB, Semantic Kernel, Python, Django, FastAPI, PostgreSQL, RESTful APIs, Amazon Web Services, AWS RDS, Google Cloud Platform

- Created evaluation cases and test suites for AI-assisted workflows, catching quality regressions before they reached users and improving release confidence.
- Built Python and Django features for pharmacy operations, increasing order-processing efficiency by 35% across digital healthcare workflows.

- Maintained current documentation and runbooks for service behavior, support steps, and deployment procedures used by the team.
- Investigated latency spikes and tool-call failures in FastAPI services, then tuned backend logic to reduce response time by 40%.
- Integrated structured LLM interactions with Semantic Kernel, including prompting and function calling for internal workflow support.
- Extended React interfaces and MongoDB-backed data flows to support pharmacy operations, status tracking, and backend debugging.

WPP

Mumbai, India

Python Developer

Mar 2020 - Oct 2021

Digital marketing engineering supporting campaign platforms, service integrations, and production delivery across backend systems.

Tech Stack: Flask, CI/CD, Java, Go, C#, TypeScript, AWS, GCP, Azure, Kubernetes, Python, Django, Django REST Framework, PostgreSQL, RESTful APIs, Docker

- Built backend services with Python and Django for campaign workflows, increasing operational efficiency by 30% for internal marketing teams.
- Implemented prompt guardrails and tool definitions in Flask-based services, iterating from eval results to refine outputs instead of relying on intuition.
- Delivered production software across RESTful APIs, databases, version control, testing, and debugging over 18 months of backend-focused work.
- Contributed to code reviews, design discussions, and post-incident analyses while asking questions and sharing debugging lessons and delivery updates with engineers.
- Optimized pipeline execution across Kubernetes and cloud environments, reducing campaign report generation time by 40% for reporting users.
- Standardized deployments with Docker and CI/CD while supporting Java, Go, C#, and TypeScript services across AWS, GCP, and Azure.

EDUCATION

University of Central Missouri

Master of Science in Computer Science - Aug 2023 - Dec 2024

Kamala Institute of Technology & Science

Bachelor of Technology in Computer Science Engineering - Jun 2018 - Jul 2022
